

SAI YASASWI, GURAJADA

Full-Stack AI Application Developer || +91 9885808593 || yashaswigurajada@gmail.com || [LinkedIn](#)

Full Stack AI Application Developer with 4+ years of experience designing, developing, and deploying cloud-native enterprise applications across full-stack development, microservices, REST APIs, and AI-enabled platforms. Proven track record of building scalable multi-tenant systems, modernizing legacy architectures, and delivering workflow automation solutions that improved operational efficiency, reduced deployment effort, and accelerated feature delivery. Experienced in integrating Python-based AI services, LLM-powered workflows, and agentic AI frameworks including LangChain and CrewAI to streamline business processes and reduce manual intervention. Proficient across Angular, Spring Boot, Python, PostgreSQL, and Elasticsearch, with end-to-end ownership of application delivery from solution design and implementation through testing, security hardening, and CI/CD automation using Azure DevOps and Kubernetes. Strong foundation in DevSecOps, cloud-native architecture, and governance-oriented AI development, with a consulting mindset focused on translating complex business requirements into measurable customer outcomes.

PROFESSIONAL EXPERIENCE

4 Years

➤ SOFTWARE ENGINEER at ASCENDION ENGINEERING

June 2025 – Present

- Developed backend services for AAVA, enabling orchestration of 20+ workflow artefacts and supporting multi-tenant software development, deployment, and governance workflows.
- Architected RESTful APIs and Spring Boot microservices, reducing workflow execution latency by 30% and improving responsiveness across multi-tenant workflow processing.
- Integrated Python-based AI services, LLM-powered workflows, and agent frameworks into orchestration pipelines, reducing manual intervention by 40% and accelerating execution of AI-assisted workflows across multiple business processes.
- Built reusable Controller, Service, DTO, validation, and exception-handling frameworks adopted across 5+ platform modules, reducing new-feature onboarding effort by 30%.
- Implemented Java-to-Python workflow execution APIs, reducing integration complexity across workflow runners and enabling execution of AI workflows across multiple runtime environments.
- Established artefact lifecycle workflows covering CRUD, approval, versioning, auditing, and governance, reducing onboarding effort by 40% and improving traceability across workflow configurations.
- Modernized legacy services into cloud-native containerized microservices, reducing deployment issues by 25% and improving deployment consistency across Dev, QE, and UAT environments.
- Delivered 15+ platform enhancements across workflow orchestration, governance, and execution services, accelerating release readiness and reducing post-release support effort across multiple platform modules.
- Strengthened platform security through validation frameworks, secure file-processing controls, and cloud-native identity integration, eliminating critical upload vulnerabilities and improving compliance readiness.
- Remediated 100+ application and container vulnerabilities through dependency upgrades, secure build practices, and DevSecOps automation, improving deployment readiness and reducing security risk exposure.
- Automated Azure DevOps and Kubernetes-based deployment workflows, reducing deployment effort by 50% and improving release reliability across three deployment environments.

➤ SOFTWARE ENGINEER at ENCORA INNOVATION LABS

April 2024 – August 2024

- Ensured uninterrupted customer delivery during the TIBCO-to-Encora engineering transition, supporting product releases and production issue resolution for enterprise customers.
- Delivered an API-first integration solution using OpenAPI and Swagger specifications, reducing customer dependency on UI-driven workflows and accelerating integration adoption.
- Owned end-to-end implementation of the CMI Protocol for the 1.5.0 release, delivering functionality within release timelines and enabling seamless interoperability with partner systems.
- Defined reusable RESTful service contracts that reduced client integration effort and accelerated onboarding of external partner systems.
- Contributed to Angular UI enhancements, CI/CD automation, and testing initiatives, reducing regression effort by 30% and improving release quality.

➤ SOFTWARE ENGINEER at TIBCO – CLOUD SOFTWARE GROUP

September 2021 – March 2024

- Delivered enterprise B2B integration capabilities for TIBCO BusinessConnect Container Edition, supporting secure data exchange across global partner ecosystems.
- Implemented ebXML and ebMS3 protocol integrations, expanding interoperability across multiple enterprise customer environments.

- Delivered multiple product releases by implementing customer-driven features, developing API integrations, resolving complex production issues, and enhancing platform reliability, scalability, and maintainability.
- Improved application performance by up to 50% through protocol-level optimizations and bottleneck analysis during testing and validation.
- Assumed ownership of Angular-based UI enhancements and frontend-backend integrations, ensuring release continuity and an improved user experience when dedicated UI resources were unavailable.
- Reduced issue resolution timelines by 35% through root-cause analysis and remediation of high-priority customer escalations.
- Reduced onboarding ramp-up time by approximately 60% through structured mentoring, technical guidance, and knowledge-transfer initiatives.

TECHNICAL SKILLS

- ❖ **Programming Languages:** Java, Python, TypeScript, JavaScript, SQL
- ❖ **Full-Stack Development:** Spring Boot, RESTful APIs, Microservices, Angular, Node.js
- ❖ **AI:** LangChain, CrewAI, Azure AI Search, LLM Integration, RAG, AI Workflow Automation
- ❖ **Cloud, DevOps & Build Tools:** Azure DevOps, GCP, Docker, Kubernetes, Gradle, Maven, GitHub, Jenkins, ArgoCD
- ❖ **Databases & Search:** MySQL, Postgres, Redis, Elasticsearch
- ❖ **Developer Tools:** IntelliJ IDE, Postman, Swagger, Figma, CheckMarx, JFrog

PROFESSIONAL DEVELOPMENT

- EXECUTIVE PROGRAM IN PRODUCT MANAGEMENT IN GENERATIVE AI AND AGENTIC AI
at **BITS SCHOOL OF MANAGEMENT** January 2026 – Present
-
- Developing expertise in Product Management fundamentals, including user discovery, problem framing, market research, value proposition design, and product strategy.
 - Applying Generative AI and Agentic AI concepts to product design, with hands-on exposure to LLM-powered applications, prompt engineering, and AI-native product workflows.
 - Learning data-driven product decision-making through product metrics, experimentation, A/B testing, customer insights, and business impact analysis.
 - Collaborating on the design and validation of SalesScout AI, evaluating AI-driven sales research workflows aimed at reducing manual account research and improving pre-meeting preparation efficiency.

EDUCATION

Course & Specialization	University	CGPA	Year of Completion
B.Tech, Computer Science and Engineering	Jawaharlal Nehru Technological University, Hyderabad	8.65	2021

CERTIFICATIONS

- **Database Design Using SQL** – Issued by Oracle in association with TASK in August 2018
- **Microsoft Technology Associate: Networking Fundamentals (MTA)** – Issued by Microsoft in April 2018 ([Link](#))
- **AWS Academy Graduate – AWS Academy Cloud Foundations** – Issued by Amazon Web Services (AWS) in May 2021 ([Link](#))
- **Blue Prism Foundation Training for Robotic Process Automation (RPA)** – Issued by SS&C Blue Prism in June 2021 ([Link](#))
